15	2.47	0.053
14	2.52	0.052
13	2.58	0.047
12	2.64	0.037

Think Phaze II, but pearl. Take that and multiply it by A.I. Core technology. Lastly, finish it with a brilliant, all-new polishing compound that ensures it'll turn as many heads for its shelf appeal as it does for its ball reaction. The Velocity legacy meets A.I. engineering in what could be the most thrilling mashup of the year. The Velocity weight block was already a force to be reckoned with. It's low RG/high differential symmetric combination, but the Phaze A.I. diversifies itself even further with the inventive A.I. outer core that enhances ball dynamics and boosts pin carry. TX-16 is the secret sauce to the Phaze II's storied success. The pearl form of it is even more dynamic, especially on the backend. The Phaze A.I. will create the most dominant entry angle of any shiny Phaze produced thus far. This coverstock chemistry is fortified with an all-new polishing compound and process being used here at Storm. We listened to your feedback, so we delivered. Power Edge offers a balanced approach to restoring and enhancing the surface of your bowling ball.
